## SUPERFUND SITE STRATEGY RECOMMENDATION

Garland City Landfill (Castle & Miles Roads) (TXD980750368)

### DISCUSSION

The Garland City Landfill @ Castle & Miles site occupies 80 acres and is an active municipal landfill. The landfill only accepts municipal solid wastes, no hazardous or liquids waste are accepted. The facility is fenced with a three foot clay liner. Sampling of the landfill indicated the presence of two pesticides and PCBs in two sample locations.

The following conclusions are based on HRS pathway analysis. There are no municipal water wells within 4 miles of the facility, and the clay liner prevents migration to groundwater. Due to these factors, there is no significant HRS ground water component score. The nearest perennial stream is over a mile from the site, due to this distance and the lack of a release detected in the stream, the HRS surface water pathway does not contribute significantly to the site score. Due to the lack of residences within 200 feet of the site, the HRS air migration and soil exposure pathways do not contribute significantly to the site score.

Due to the lack of a hazardous waste detected and migration to potential receptors, the Garland City Landfill @ Castle & Miles site does not meet the minimum criteria of a viable candidate for inclusion on the Superfund National Priorities List; therefore, the site is designated a disposition of No Further Remedial Action Planned (NFRAP), and at this time does not warrant further investigation under Superfund.

This site is being referred to the State of Texas for any appropriate action under the state's regulations.
